

LINKING CABLES

FOR VILLAGE LIGHTING CO. BATTERY PACKS

MODEL #: V-20751

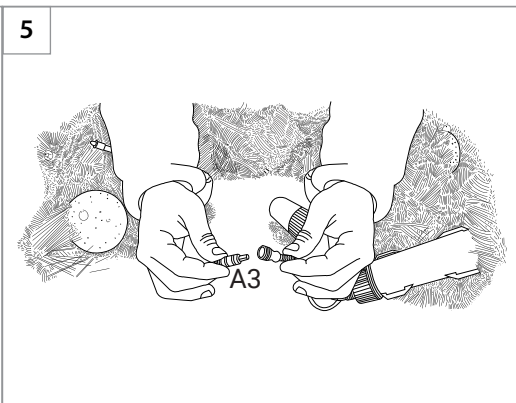

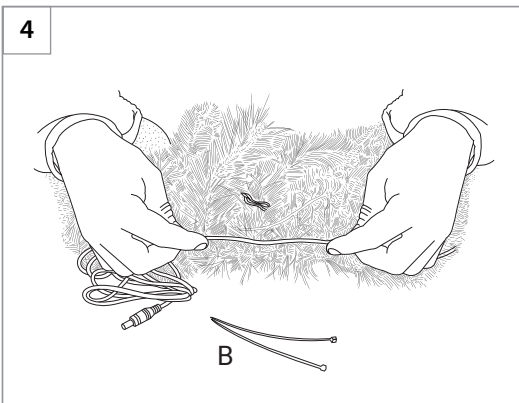

www.VillageLighting.com

Lay your garlands out flat with the battery packs easily accessible.

Locate the female power plug on the battery pack of each garland.

Connect the first male plug (A1) of the linking cable into the female plug of the battery pack.

Straighten out the cable and wind it through the center of the garland until it reaches the opposite side. Use Ties (B) to secure the wire to the garland.

Plug in the last male plug (A3) into the female plug of the next battery pack. **

****If you're plugging in additional cables and garlands in sequence, instead of plugging (A3) into the battery pack to terminate the line, plug it (A3) into (A2) of the next linking cable, and (A1) of the next linking cable will be plugged into your battery pack. Repeat this for up to 6 garlands/battery packs end to end.**
